

VIRUS FREE ENVIRONMENT

Rather than cleaning one's hands, why not clean objects that one touches instead? It is time for advanced prevention. Apollo & Powerbox works simple and offers a proactive way to sterilise your day to day items. Just place any personal item (glasses, keys, face masks, wallet, watch, pens, jewellery, etc.) on the sterilisation pad and start your journey towards a clean and virus free environment. Apart from this, whilst getting rid of all bacteria, viruses and fungi you are charging your phone at the same time with the integrated wireless charger!

UV POWERBOX & APOLLO works simple and offers a proactive way to sterilize your day to day items.

- Decoration cost for 1 color logo on 1 position inclusive in the above prices.

DESCRIPTION

UVC light is invisible radiation that works on a 253 nm wavelength. Compare it to a less strong UV radiation like sunlight. It is widely accepted that these short, energetic wavelength of light kill pathogens, viruses and bacteria by rupturing the cell walls. UVC is a staple method of sterilisation - one used in ventilations, cosmetics industry, hospitals, airplanes, offices and factories every day. As a result, this form of UVC is now one of the front line tools in the fight against Covid-19. Banks are using UVC emitting robots to disinfect bank notes around the clock.
